

## 1 Overview

The main purpose of this document is to define the GridLab testbed environment, its basic properties and requirements which must be fulfilled by all the participating sites. The document defines the principal properties of individual sites together with a proposal how to control and

part of a general authorisation scheme (to be developed with close cooperation with the work package 6 – Security).

If at least one of the sites accepts the user, the appropriate line is added to the common grid-

## Testbed Policy

sites will be granted authorisation to add new accounting information (via the LDAP access

The described activities form a rudimentary basis of a general *user support* of the GridLab testbed. This will include help desk procedures, methods of dissemination of user information, the bug tracking system, news announcements and related activities (see also[7]). For this

require a specific testbed where not yet fully stable middleware components will be tested. This, however, may imply disruptive services and unavailability of such testbed for other purposes. We expect to provide *development testbed* for such purposes. This testbed will be constructed
